

Executive Insight Flow

This workflow automates the analysis of executive KPIs from Supabase data. A user selects a business question via a form; the workflow runs an approved SQL query, generates a chart, creates an AI-generated executive summary, and emails the results.

User Input

Collects the analysis area, business question, time period, and recipient email.

Question Routing

Routes the request to the correct SQL analysis based on the selected area and question.

Runs predefined SQL queries against Supabase/Postgres tables. Aggregation happens in SQL, not in n8n code.

Chart Preparation

Transforms the SQL result into a QuickChart-compatible chart configuration.

AI Executive Summary

Uses OpenAI to turn the structured KPI result into a concise manager-friendly insight.

Email Delivery

Sends the chart and executive summary to the selected
